

Greenhouse Challenge Plus – Conference and Awards Function 2007

Renewtek has been invited to participate as a sponsored speaker at the Greenhouse Challenge Plus Conference and awards function at Parliament House in Canberra in September.

This honour is in recognition of Renewtek's industry leading initiatives concerning greenhouse gas emissions and taking on a prominent role in communicating to the information technology industry about this subject.

The conference is being organised by the Department of Environment and Water Resources and will be attended by representatives from 400 companies with an interest in the field of sustainable development.

The aim of the conference is to share information about ways in which businesses and other organisations can reduce their greenhouse gas emissions.

The conference will be opened by the Minister for of Environment and Water Resources, Malcolm Turnbull and the keynote address presented by an internationally acclaimed climate change expert. Other speakers from industry and business presenting at the conference include representatives from Visy, SA Water, Alcoa and CSBP.

The essence of Renewtek's presentation will be:

- Our journey in being the first IT (and professional services) company to achieve the Australian Greenhouse Office Greenhouse Friendly compliance
- Our subsequent work in communicating the greenhouse message, including engaging the 2007 Australian of the Year, Professor Tim Flannery, to facilitate a number of business forums in Melbourne and Sydney on the subject of global warming and what can be done about it.
