

Renewtek VERS FileNet Plug-in

VERS

The Victorian Government Electronic Records Strategy (VERS) is a solution for capturing, managing and preserving electronic records. It has been developed by the Public Records Office Victoria (PROV) and adopted as a standard for electronic record keeping and archiving across Victorian and National Government.

The PROV standard (version 2) supports 3 types of VEO:

1. File VEO
2. Record VEO
3. Modified VEO

Renewtek VERS FileNet Plug-in

The Renewtek VERS FileNet plug-in is designed and implemented against this standard. It provides FileNet Workplace and Records Manager with the facility for managing all 3 VEO types. It facilitates importing an existing document as VERS Encapsulated Object (VEO) or to encapsulate a document already stored in FileNet. It further provides the ability to export documents as VEOs.

The Renewtek VERS plug-in supports natively storing documents in VERS encapsulated format within FileNet. Such documents are imported using a simple wizard to gather the metadata required and stored using the standard FileNet records Manager. This allows all the usual FileNet tools to be used in managing the VEO such as Search tools and disposal scheduling.

The below diagram shows how the Renewtek VERS plugin fits in to the existing FileNet Workplace and Records Manager infrastructure.
